

# Pravila za korišćenje homeopatske radioničke mašine:

1. Na prednjem delu (zavisno od tipa) uređaja se nalaze dugmad sa obeleženim kodovima. Prvo dugme je gore levo, onda je sledeće nadesno, kao što se čita i piše, pa se prelazi u red ispod i tako nadalje. Kod se redom namešta na dugmadima kao tekst koji se čita.
2. Sa donje strane se nalazi postolje za baterije od 9V, koje treba da su što kvalitetnije. Traju mesecima, zavisno od frekventnosti korišćenja.
3. Kodovi lekova se nalaze na spisku, na kojem se iza imena leka nalazi broj koda. Nove kodove možete preuzeti sa interneta, sa više adresa i svi odgovaraju, ne pripadaju ovoj mašini ali na njoj mogu da se koriste, kao i svi kodovi ostalih radioničkih mašina iz dekadnog brojanog sistema.
4. Potencija koja se želi dobiti se bira na posebnom dugmetu, ili trocifrenom brojaniku (zavisno od tipa).
5. Dugme se pritisne i drži oko 3 sekunde. Pri tome treba da se čuje zvuk, a na nekim mašinama i da svetli "led" iznad dugmeta.
6. Ako je tip mašine sa laserom, Radionik "β" i dalje, držite dugme pritisnuto dok laser radi.
7. Ako želite dobiti lek u tečnosti, koristite okrugle staklene bočice, najbolje sa kapaljkom, mada se mogu koristiti i plastične.
8. Lekove u tečnom obliku možete pripremljati u 10-70% alkoholu, brendiju, vodki ili nekom drugom destiliranom alkoholnom piću (loza, npr.)
9. Kodove namestite pre nego što pravite lek, a vratite ih na nulu čim lek završite.
10. Tečni lek u 10% alkoholu može da traje 1 mesec, a tablete 6 meseci. Sa njima se postupa kao i sa svim ostalim homeopatskim lekovima. Ukoliko se neki lek nađe u magnetskom polju, ili bude izložen zračenju, njegove vibracione karakteristike se privremeno ugase, sve do momenta kada isti lek dobro protresete 20-30 puta (shvatite to kao prašinu koju treba podići, ili kao igračke u staklenim loptama sa kućicom i snegom).
11. Nemojte da pravite zalihe lekova, jer je to nepraktično, jer traju oko 6 meseci. Ne bi bilo loše da pored imena, koda i potencije leka, napišete i datum kada je napravljen i dokle mu je trajnost.
12. Ako hoćete da depotencirate, neutralizujete tablete ili tečnost, podesite kodove na nulu, i uključite maksimalnu moguću potenciju (npr. 999 5M), te je držite 10-15 sekundi.
13. Ako kod sadrži broj deset (10) onda se on u šifarniku kodova nalazi isto tako u zagradama, za razliku od broja 0 i broja 1 koji se u sledu obeležavaju bez zagrade, kao 10
14. Mašina pravi lekove od potencije 0 do 5m (MMMMM ili 1 000 000 000 000 000) i LM
15. Potencija CM se pravi kao 100 M
16. Prenos sa uzorka, svedoka na lek se projektuje sa gornjeg (gde se stavlja uzorak, svedok) na donji bunarčić (gde je uzorak, svedok pacijent), sa time da su svi kodovi nula (0), a kod emitovanja na

pacijenta se uzorak, svedok pacijent, stavlja u donji bunarčić sa time da su svi kodovi podešeni po leku koji se emituje

17. Poseban program za šifriranje lekova preko imena leka postoji i možete ga preuzeti sa interneta

<http://www.voicesync.org/releases/radionicratecalc.zip>

Možete mašinu koristiti i kao radionički tester, uz visak ili drugo radiestezijsko pomagalo.

Radionic potentiser , remedy maker (*color may vary*)

Potency facilities enabling selection of 1 X to 5M (MMMMM) and LM.

A Remedy Maker which I made is one extraordinary instrument: There is one experiment with human blood, where we made 2 plates, with blood, one was control, and woom! There is groove of a cells, chondrocytes, after 8h of emission of a laser beam from my Remedy Maker. This is only one in the world instrument with a laser beam connector. With a laser beam you can heal so many things!

There is a usual manual for a Remedy maker, and with a MP3 radionic instrument for your mobile phone.

There is one code book, but you can use a radionic rate calculator for your PC, where you can calculate 8 number codes for any specific remedy you want.

You can use it like "obvious" remedies, but, also, if you connect chinch cable into remedy maker, by one side, and the other side into PC speakers (one pair with amplifier is round 10 \$), and that speakers you can place near of the patient (you have to turn volume on half ), and if you push the button trough 1 minute, you can cure a serious illnesses

You can use a laser beam, or coil.

What the coil or the laser were for. Which would be more appropriate for using with rates like this? If you want to target a particular part of the body, do you use the coil or the laser?

The laser is for surfaces and 5-10mm deep, the coil is for deeper tissue structures, it goes 2-3 cm deep. You can cure a bleeding, help coagulation also.

## Rules for the use of homeopathic remedy maker

1. On the front panel (depending on type) device are buttons labeled with codes. The first button is on the top left, then next right, such as one read and write, so it goes into the row below and so on. Codes are deialled on the buttons using reading order – from left to right, top to bottom..
2. On the bottom is the base for a 9V battery, which should be high quality. They last for months, depending on the frequency of which use.
3. Codes for remedies included in the list, next to the name of the remedy. New codes can be downloaded from the Internet, from various web sites, all match, this list do not belong to this machine but it can be used, as well as all other codes for remedy machine as long as they are in decade number system.
4. Wanted potency is dialled on a separate button, or three-digit dial (depending on type).
5. Button is pressed and held for 3 seconds. It should make a sound, and on some machines it lights "LED" button above.
6. If your machine is with a laser, radionics "β" then keep holding the button down until the laser works.
7. If you liquid remedy, use a round glass bottle, preferably with a dropper, but can be used plastic as well.
8. Remedies in liquid form, you can prepare in 10-70% alcohol, brandy, vodka or any other distilled alcoholic drink (grape, for example.)
9. Set codes before making the remedy, and return them to zero as soon as you finish the remedy.
10. The liquid medicine in 10% alcohol may last 1 month and 6 months for the pellets. They are treated as well as all other homeopathic remedies. If a remedy is found in the magnetic field, or being exposed to radiation, its vibration characteristics are temporarily shut down, until the moment when the remedy is shaken 20-30 times (Think of it as dust to be picked up, or as toys in glass balls with house and snow).
11. Do not make stock of remedies, because it is impractical, they last about 6 months. It would be a good idea in addition to the names, codes, and potency of the drug, to write down the date when they are made and theirs durability.
12. If you want to depotencirate/neutralize tablets or liquid, set codes to zero, and turn on the maximum possible potency (eg 999 5M), and hold button for 10-15 seconds.
13. If number ten (10) is in code for remedy then on the codes in the code book 10 is written in brackets (10), as opposed to the number 0, and the number 1 in the sequence which are not marked with brackets as 10
14. The machine makes drugs of potency 0 to 5M (MMMMM or 1 000 000 000 000 000) LM
15. CM potency is made as 100 M
16. Transfer of the sample/ witness to the remedy is projected from the top (where the sample is placed, the witness) to the lower well of (where the sample, the witness patient), all the codes are zero (0). When the broadcast pattern of the patient, witness patient, placed in the lower well of the time that all the codes are set by the medicine being transmitted
17. A special program for encrypting drugs over the name of the medicine can be downloaded from the Internet  
<http://www.voicesync.org/releases/radionicratecalc.zip>

You can use the machine as a workshop tester, with a surplus or other radiesthetical aid.
